

# Political participation and subjective well-being

Polina Revina

Course on Bayesian Statistics  
IPSA-HSE Summer School  
2019

# How does subjective well-being affect political participation?

- Institutional trust and subjective well-being across the EU, Hudson (2006)
- Formal institutions and subjective well-being: Revisiting the cross-country evidence, Bjørnskov, Dreher (2010)
- Income, sense of community and subjective well-being: Combining economic and psychological variables, Jorgensen, Jamieson, Martin (2010)
- Subjective well-being and political participation: A comparison of unemployed and employed youth, Lorenzini (2015)
- Depression and political participation, C Ojeda (2015)

# Data

- European Social Survey (ESS), France, round 8 (2016)
- 1871 observations
- DV: **confidence in own ability to participate in politics** (ordinal variable ranging from 1 -- total lack of confidence to 5 -- full confidence)
- IVs:
  - Subjective general health (health): 1 -- very good, 5 -- very bad
  - Take part in social activities compared to others of same age (sclact): 1 -- much less than most, 5 -- much more than most
  - How many people with whom you can discuss intimate and personal matters (inprdsc): None, 1, 2, 3, 4-6, 7-9, 10 or more
  - Respondent or household member victim of burglary/assault last 5 years (crmvct): 1 -- yes, 2 -- no
  - Feeling of safety of walking alone in local area after dark (aesfdrk): 1 -- very safe, 2 -- safe, 3 -- unsafe, 4 -- very unsafe
  - Feeling about household's income nowadays (hincfel): 1 -- living comfortably on present income, 2 -- coping on present income, 3 -- Difficult on present income, 4 -- Very difficult on present income
